

MAMMOTH
NOW DE-EXTINCT

STRONG STURDY
ALWAYS ON THE MOVE
POWERFUL RESILIENT
BORN TO ENDURE
BIG IMPOSING
SILENTLY COMMANDING
RESPECT, ITS TIME TO
HAIL TO THE
MAMMOTH

WHEN IT COMES TO LUXURY TRAVEL
NOBODY DOES IT BETTER THAN THE
INGENIOUS, STATE - OF -THE-ART,
MAMMOTH. BUILT TO SUSTAIN THE
TOUGHEST OF CONDITIONS, THIS
ROBUST BEAST SETS NEW BENCHMARKS
WHEN IT COMES TO QUALITY, SAFETY,
COMFORT AND DESIGN. SO WHETHER
YOU'RE A PASSENGER SEATED ON ITS
PLUSH SEATS OR A DRIVER BEHIND
ITS EASY POWER STEERING, REST
ASSURED THAT YOUR RIDE WILL BE
NOTHING SHORT OF FIRST CLASS.

Mammoth

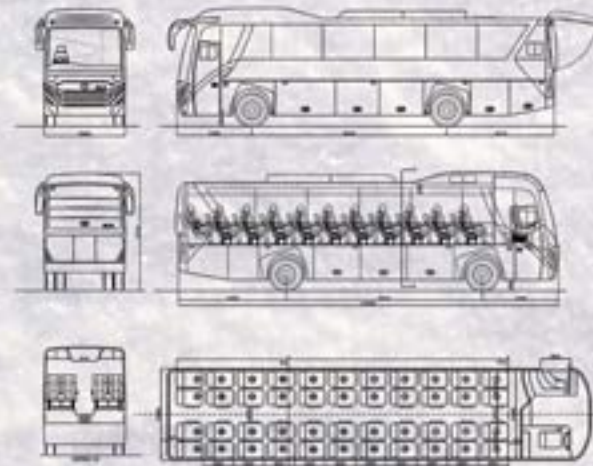

With an Aerodynamic Exterior design and a beast of a body that is fully and completely engineered for Serviceability & Maintenance, the Mammoth promises to take riding to the next level.

Our full driver partition gives your passengers a private, saloon like experience blessing them with two essentials while travelling- peace and quiet.

With opulent pushback seats and cushiony padding alongside the window rail providing a comfy armrest, your patrons will feel like they're floating on a cloud.

Every one of our lavish seats comes attached with personalised reading lamps, as well as mobile and USB charging ports. A centre hatrack console provides an equal and well distributed flow of cool air for all passengers, while a pillarless hatrack allows easy access to the spacious head luggage compartment above.

Not one to compromise on safety, the Mammoth is fully Bus Code Compliant and comes equipped with an on-board safety instruction card for each passenger. A total of 8 emergency exits including EM - Secure make evacuation safe and panic free, incase of an emergency situation.

Other safety measures include no sharp corners, a seat belt for every passenger, plus our full driver partition acts as an additional barricade incase of frontal impact.

Powered with a six-cylinder in-line diesel engine with direct injection, that is both turbo charged and intercooled, this ultra efficient vehicle comes equipped with two oil filters, oil cooler, piston cooling, extra fuel filters & water separators. Quiet, reliable and time tested it has an electronically controlled engine with optimized Power and flat Torque Curve over a wide engine RPM

All wheel air suspension and easily accessible suspended pedals make the drive more comfortable for the driver.

In addition to regular Cruise Control, it also offers Downhill Cruise Control. This helps maintain a constant speed while driving downhill without having to use the service brakes or change gears, which seriously minimizes driver fatigue while increasing passenger safety.

CHASSIS

An optimized driveline allows you to cruise at higher speeds at lower engine revs for high efficiency & quiet running with significantly low noise levels . A Fully air suspended , rugged and torsionally rigid chassis designed for highly stable driving and excellent ride comfort. One of the safest and most effective braking systems consisting of Service brakes with ABS.

MAN patented Engine Exhaust Valve Brake & Hydrodynamic Retarder for smoother & safer braking, increases tyre life, fuel saving, long brake liner life, low heat generation and most importantly, a fatigue free journey.

The fuel tanks are safely positioned in the centre between the chassis long members for passenger safety and increased luggage space . An expansive network with over 60 Service Centers across the length and breadth of India, plus a 24x7 call centre, assure top of the line after-sales service.

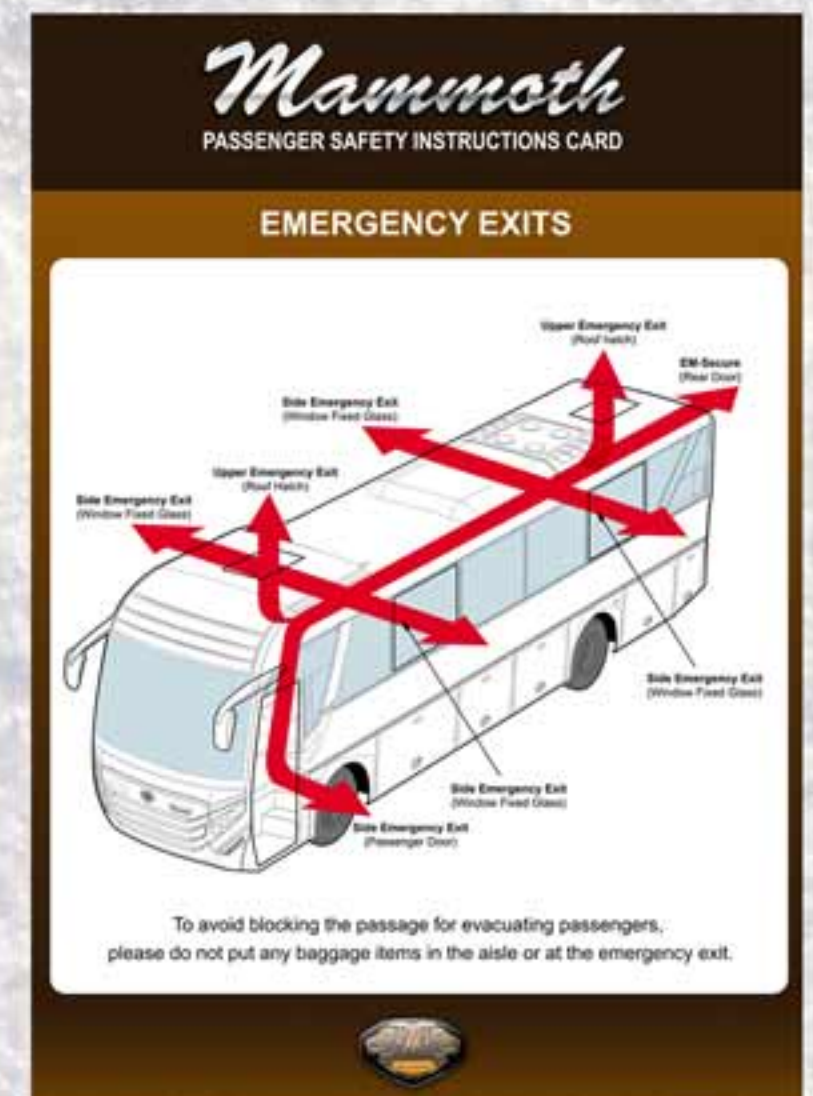

EM-Secure (Rear Emergency Exit)

Equipped with EM-Secure, the Mammoth is revolutionizing road safety and setting new benchmarks as far as the well being of its riders is concerned.

Traditionally, the emergency exit door is always in the right hand sidewall glass panel towards the rear end blocked by a row of 2 seats in front of it, making it time consuming and hazardous to use in the unfortunate event of an emergency.

Apart from the height of the window glass panel exit wall of the exit is 5 feet off the ground making it difficult and dangerous, especially for children and the elderly, to exit.

EM-Secure

The 'EM-Secure' solution provides a clear and well-marked emergency exit located at the rear end of the Mammoth, which is easily approachable and unhindered by any obstructions.

A manually ejected stairway built with assist handles to provide support while descending, allows passengers of all age groups to evacuate the coach unharmed as the height between the last step and the ground is less than two feet.
